

Forensic Examinations - Terms and Techniques

This is a call for papers for the special themes of the 2021-issues

Contributed papers in English or Russian on any topic within the scope of the journal are also welcome

Forensic Examinations - Terms and Techniques (Deadline: March 21st, 2021)

The topic of the special issue is forensic science which, historically, is deeply associated with linguistic technologies.

Forensics involves the reading and interpretation of traces, and many early success-stories of forensic expertise concern the identification of forgeries. In today's forensic science, procedures and protocols establish the terms of technical practice. Accordingly, innovations in forensic science can be linguistic innovations, calling for the observation and analysis of trends in the development of the language and practice of forensic science.
